

## Installing Kaspersky Internet Security 2009

by Mark Boughton - Aussie PC Fix

If you do not already have an *Activation code (license key)*, you may [purchase these at a discount from Aussie PC Fix](#) or [contact us](#), or buy online at full price from <https://estore.kaspersky.com.au>

**First, make sure you DO NOT have any existing Antivirus or Firewall programs installed.**

You can download uninstall utilities for [Norton \(Symantec\)](#) and [McAfee](#) which are preferred over using the Control Panel Add/Remove Programs method. *Windows Vista users must right-click the downloaded files and select **Run as Administrator!***

If you have a different antivirus, firewall or security suite installed then you should remove the program via the Control Panel Add/Remove Programs, or any other method recommended by the author/company.

**Next, download the latest version of KIS 2009** from <http://www.kaspersky.com.au/subpage/134/download.aspx>

and double click on the file to open it (your file may be named slightly differently!)

 kis7.0.1.325en.exe	33,764 KB
 kis8.0.0.357en.exe	7,966 KB
 kis8.0.0.357en_au.exe	33,038 KB
 kis8.0.0.454en.msi	38,362 KB

This will start the *Setup Wizard*, click **Next** to start the installation of KIS 2009

Click to select **I accept the terms...** then click **Next**

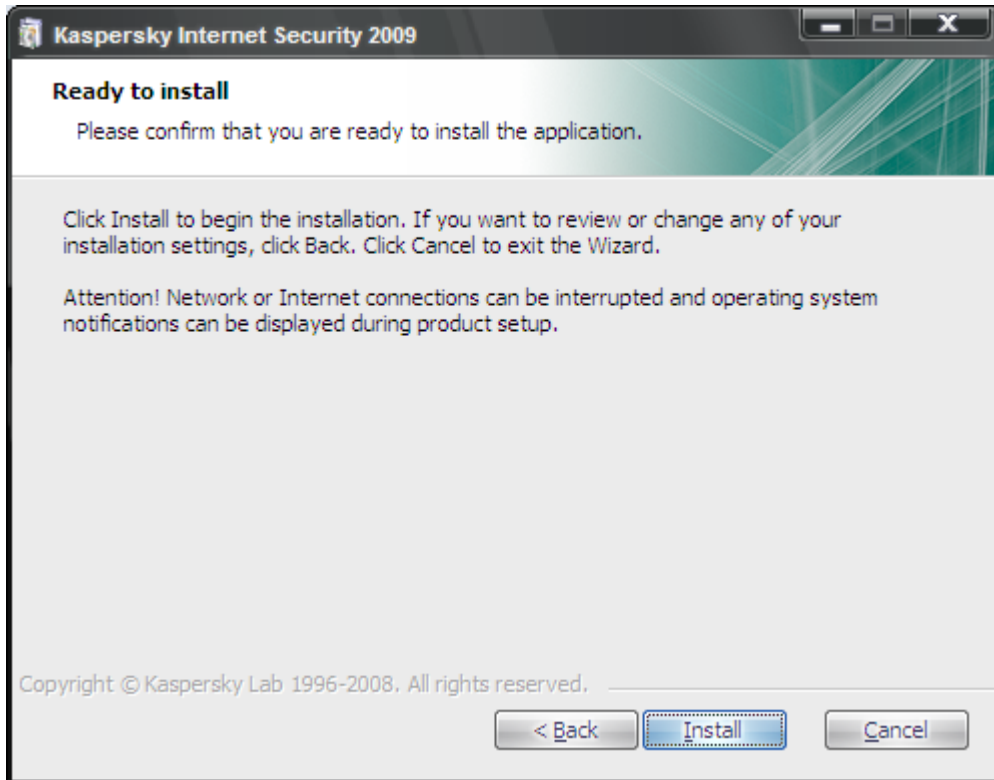

Most users should select **Express installation**, you will get some more options if you select **Custom**

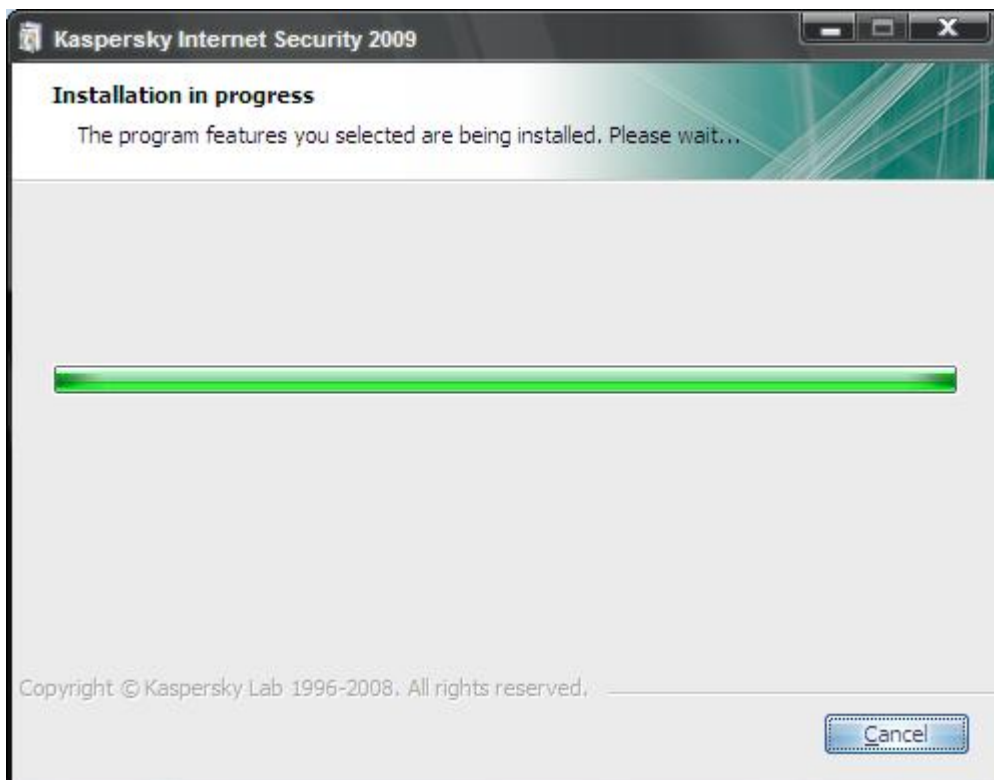

You may have **Incompatible software** on your PC that must be removed before KIS is installed. Click next to automatically remove them, then installation will continue after it restarts the PC.

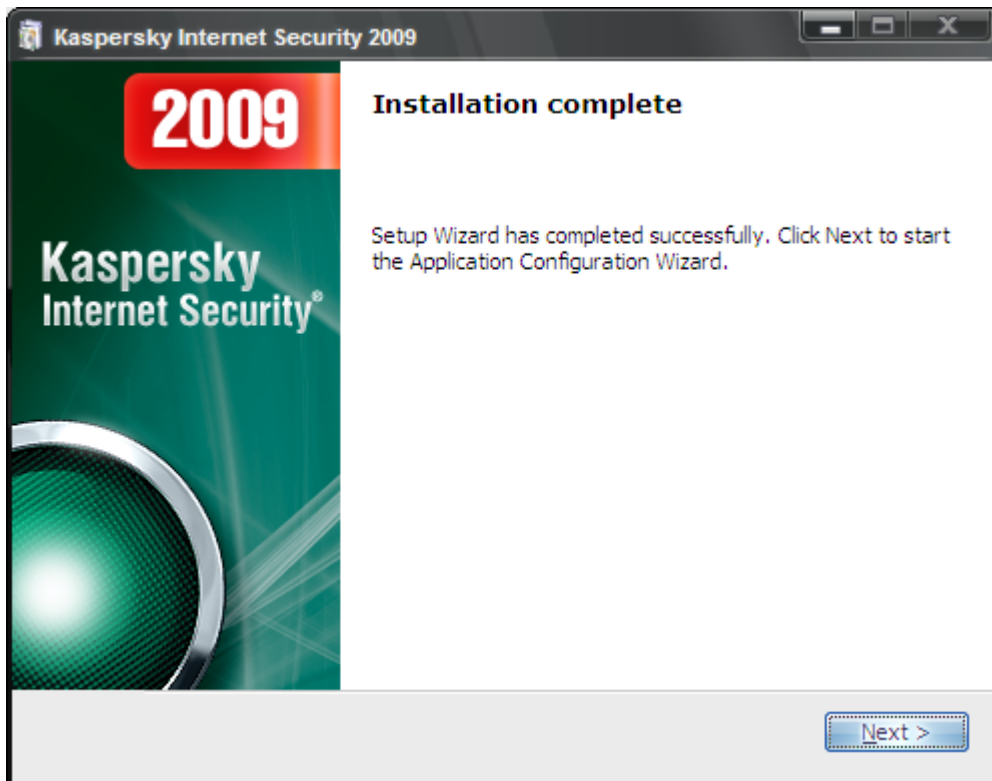

Once KIS is **Ready to install**, simply click the **Install** button, noting you may get some warnings about networking, Internet or security during KIS setup.

Installation will start, please wait a short while.

Installation will complete – congratulations, you have installed KIS!

There are still a few more steps to complete the setup of KIS.

Please follow on to [KIS2009-Step2-Activating-KIS-2009-Free-Demo-or-License.pdf](#) and continue your installation. You will learn how to activate KIS with an activation code (license key), or how to activate a free 30 day demo.

Then [KIS2009-Step3-Final-Installation-KIS-2009.pdf](#) shows the final steps needed for installation.
